The Process of Recovery and Treatment Works!

EVIDENCE BASED PRACTICES (EBP): Integrated System of Care; Universal Dual Diagnosis Capabilities; Principles of Empathy and Hope; Motivational Interviewing Approach; Stages of Change Model Design; Strength Based; Skill Building; Solution Focused; Neurochemistry Based Disorders of the Brain; Symptom Identification; Symptom Management; EBP Curriculum Topics, i.e. Nutrition, Stress Management, Cognitive Behavioral, and more...

Consistency in the Group Setting

The importance of *consistency* in a treatment setting can't be overstated. This is especially true when people are placed in vulnerable situations. *Inconsistency* can, at best, increase uncertainty and insecurity for the person receiving services. At worst, unpredictability can create a sense of helplessness while simultaneously decreasing a person's development of self-reliance. In fact, all human beings benefit from a dependable approach in the treatment of chronic disorders. When a person learns they can rely on consistency, they are less stressed and more relaxed. Consistency in the group setting includes the group structure, psychoeducational material, and the approach.

Each agency or facility will have different requirements – such as group receipts or paperwork – however, consistency can still include a structure similar to the following:

- 1. Group members pick up: a. Clip Board, b. Paper, and c. Pencil/Pen as they enter the room.
- 2. Group facilitator picks up the group receipts from each person in the group, and/or the group facilitator passes out the sign-in sheet for the group members to sign.
- 3. Group facilitator provides a Positive Group Beginning, Consistent Psychoeducational Material, Consistent Approach, and a Positive Group Closure.

Psychoeducational Groups and Crisis Event Processing (when requested)

Notes to Facilitator(s):

- 1. THE BASICS, Second Edition meets the definitions and goals of Psychoeducational Groups, Skill Building Groups, and Cognitive Behavioral Groups.
- 2. Group participants who have become accustomed to Interpersonal Processing Groups as well as staff who have facilitated them may find it a challenge to now facilitate Psychoeducational Groups.
- 3. Likewise, facilitators who may have followed a more lecture-style education presentation, may find it challenging to now devote at least 1/3rd of group time to specific topic discussions and interactions.
- 4. Both types of groups (Interpersonal Processing Groups and Psychoeducational Groups) are extremely important, yet each has different goals and structure.
- 5. The structure of Psychoeducational Groups, Skill Building Groups, and/or Cognitive-Behavioral Groups in no way means that there will not be *interaction* far from it. It just means that the interactions, discussions, and exercises will be about the topic(s) of each group.
- 6. Facilitators may or not still want to allow time in each group for the group member(s) to discuss a crisis that may have occurred since the last group.
- 7. We do know, of course, that *every* person in group is typically experiencing many challenges each and every week; however, most of these incidents are often best resolved in ways other than group time where the event does not pertain to every group member.
- 8. Suggested responses to a challenge, problem, or crisis can also include suggesting the person contact their primary care provider; schedule a 1:1 appointment; reschedule their next 1:1 to an earlier time; or, meet with the facilitator after group to explore options and develop a plan.
- 9. A facilitator would, of course, not "grade" an event as being worthy or not for group time. If a person requests individual time in the group, then that would be accepted as valid and time allotted at the end of the group.
- 10. Over time, the group begins to understand the differences between a situation, a challenge, a problem, or a crisis and can make decisions to utilize group time or continue with the current psychoeducational topic.

Prepare Professionals

Suggestions for professionals to prepare themselves for group typically includes:

- 1. Review all content material, appendices, and/or handouts *prior* to group to avoid a lecturing style.
- 2. Decide beforehand the key points to be covered in each group to produce flexibility for group responses, discussions, or questions.
- 3. Gain an overall understanding of the content so summarizing is possible in order to create an interactive facilitation style.
- 4. Determine the group structure to achieve the essential balance between education and discussions.
- 5. Check group room to be sure there are enough clipboards, pencils or pens, and markers or chalk for the board.
- 6. Make enough copies of any handouts *before* group.
- 7. Write any group content on the board *prior* to the beginning of group whenever possible.

Master Guide & Master Tips to Professionals

Note: <u>*The Master Guide*</u> (located at the beginning of Volume I & II) and the <u>Master Tips to Professionals</u> (located at the back of Volume I) have many topics to assist in the group process like Master Tip #39: Suggestions For Managing Handouts For Groups (pages Master Tips 64-67). Other tips include:

- 1. Master Guide: Interactive Style (pages Master Guide 10-11)
- 2. Master Tip #1: Suggestions for Beginning Group (pages Master Tips 1-4)
- 3. Master Tip #3: Empathetic Treatment Approach (pages Master Tips 7-9)
- 4. Master Tip #4: Promoting Hope (page Master Tips 9)
- 5. Master Tip #5: Maintaining a Consistent, Nonjudgmental, and Positive Attitude (pages Master Tips 10-13)
- 6. Master Tip #12: Responding to Requests for Copies of APPENDICES (pages Master Tips 27-29)
- 7. Master Tip #13: Depth of Psychoeducational Content (pages Master Tips 29-30)
- 8. Master Tip #14: Group Closure Suggestions (pages Master Tips 30-31)
- 9. Master Tip #16: Motivational Interviewing (pages Master Tips 31-32)

Present Curriculum/Topic

- 1. It is extremely important that each group participant leave every group with more Psychoeducation than they came in with which may also include discussing a "familiar topic" yet with a "present-day" focus. Psychoeducational Groups are designed to provide education about all areas related to the management of Substance Use Disorders and Psychiatric Disorders. Psychoeducational Groups are not Interpersonal Processing Groups even though interaction and processing the particular *psychoeducational topic(s)* is essential to individualizing the topic(s) or skill(s) presented.
- It is recommended that a minimum of 1/3rd of group time be devoted to interaction (therapeutic counseling *topic* discussions). This can be accomplished depending on the individual style of the group facilitator(s) by any "present education-interact/discuss present education-interact/discuss" combination while still structuring the group to include the curriculum/topic education to be covered.
- 3. The presentation of material will, of course, be modified by the facilitator to match the functioning skills of group participants. It is important to note, however, that *THE BASICS, Second Edition* was written in a conversational language while taking into consideration a wide-range of symptom acuity and severity. Persons with co-occurring psychiatric and substance disorders benefit from learning about their disorders and how to manage them, as do all individuals with any chronic disorder(s). Each group participant will retain what is meaningful to them at the present time.

Group Beginning Suggestions

A positive group beginning (and ending) is extremely important. There are many ways to begin (and end) a group in a positive way. Suggestions to choose from can include:

- 1. Reading the Thought For The Day from a meditation book. (Note: Meditation books that also contain an index at the end of the book such as *Easy Does It* are helpful in choosing a specific reading that matches the topic(s) presented in group like Self-Esteem.), or
- 2. Reading an inspirational or humorous curriculum handout from THE BASICS, Second Edition, or
- 3. Practicing a deep breathing or a stretching exercise, or
- 4. Sharing of one thing that each person is grateful for today, or
- 5. Sharing of one positive thing that he/she did that contributed to their recovery in the past few days, or
- 6. Reading an AA Slogan with a brief explanation or AA/NA/Dual Recovery inspirational reading.
- * Recommended Beginning: Breathing Exercise (located on page Master Tips 3)

Practice Curriculum/Topic

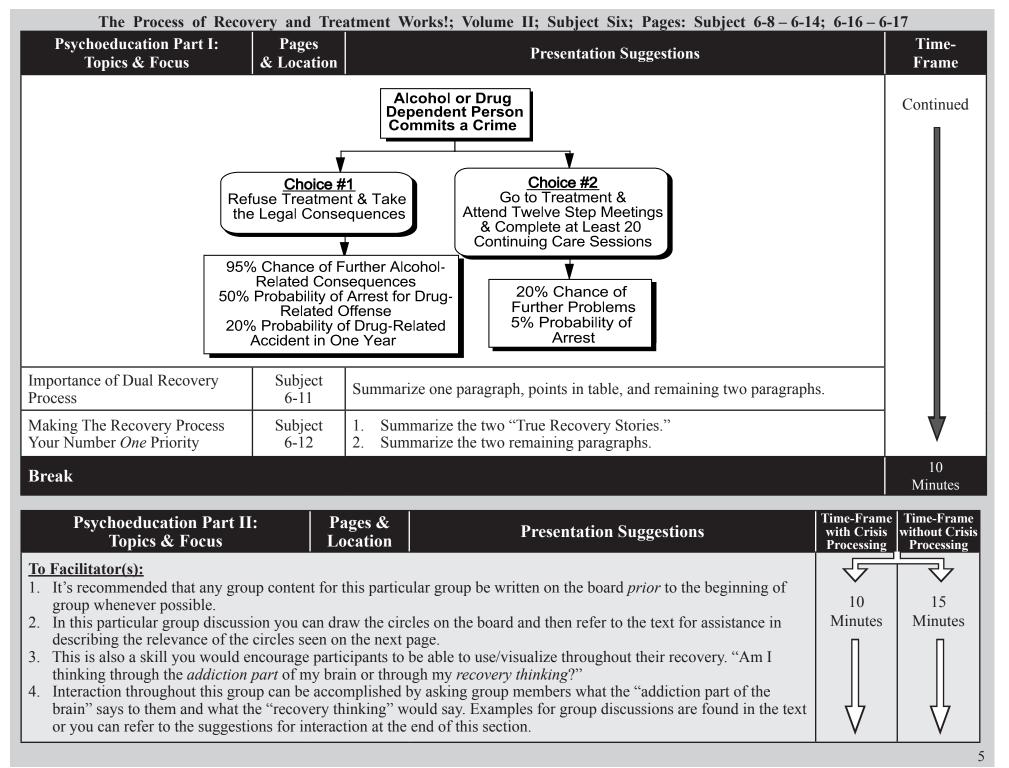

Practicing subject material is the best way participants can internalize and personalize the curriculum content. Practice includes the group interactions, worksheets, exercises, handouts, and content discussions.

The Process of Recovery and Treatment Works! Volume II; Subject Six; Pages: Subject 6-8 – 6-14; 6-16 – 6-17

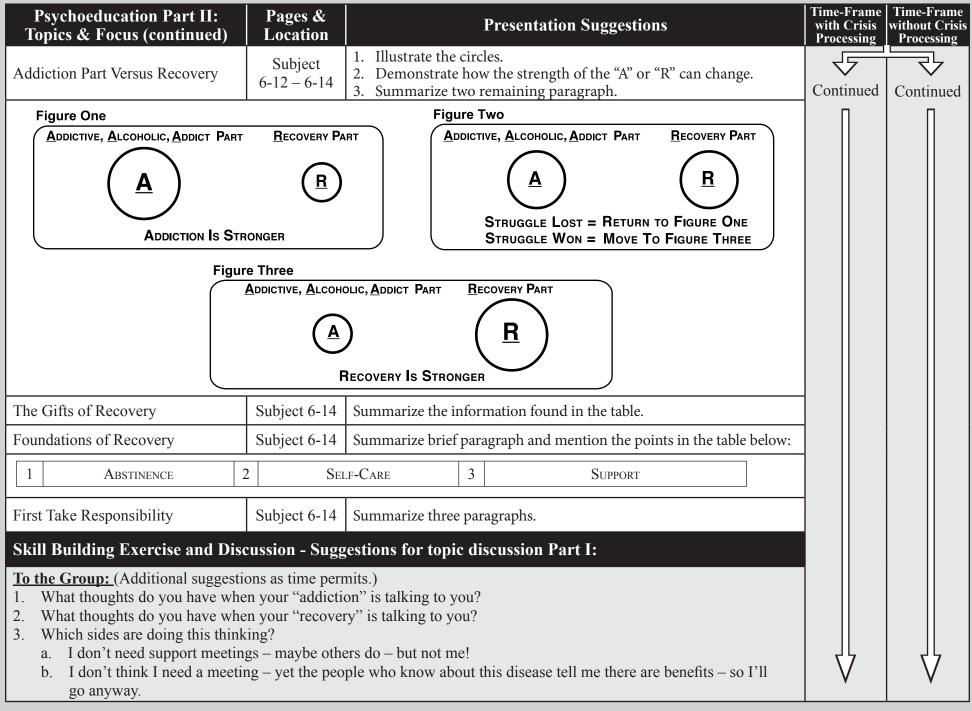

Based on a 2-Hour group: Two 50 minute segments						
Group Beginning	20 Minutes Total					
Positive group beginning (suggestions are located on the previous page).	5 Minutes					
 Brief Group Introductions: (Note: The <i>interactions</i> in a psychoeducational group are discussions about the <i>topics</i>, not interpersonal processing or case management questions which do not apply to the entire group.) Ask the group members to tell the group their name. Welcome any group members who are new to this group or phase. Crisis Processing (when requested and optional): Ask the group if anyone has experienced a crisis since their last group, and if they need/want additional time in this group to discuss it, i.e. what happened, how they managed the crisis, and/or explore options and develop a plan. Let the person(s) know that you will allow time at the end of this group for them to share their experience and receive support from their fellow group members. 	10 Minutes					
Summarize Introduction of the Group Topic and Why It's Important (pages Subject 6-8 – 6-9):	5 Minutes					
Recovery is a process – a journey – not a destination. (Author Unknown)						
<i>Abstinence</i> begins when you <i>stop</i> the addictive behavior. It occurs at a point in time, as an <i>event</i> . Recovery, on the other hand, begins when an abstinent person starts <i>growing</i> and <i>changing</i> in positive ways. It occurs over a period of time, as a <i>process</i> . Abstinence requires a decision; recovery requires <i>time</i> and <i>effort</i> (Roper, 2000).						
The process of recovery is about beginning to hope, or rekindling the hope you once had for a <i>productive present</i> and a <i>rewarding future</i> – and believing you deserve it! It involves having your own vision of the life you want, recognizing and changing old patterns, and discovering that symptoms can be managed. It means doing <i>more</i> of what works and <i>less</i> of what doesn't.						
Today we will talk about the process of recovery and treatment works!						

The Process of Recovery and Treatment Works!; Volume II; Subject Six; Pages: Subject 6-8-6-14; 6-16-6-17

Skill Building Exercise and Discussion - Suggestions for topic discussion Part III:	Time-Frame with Crisis Processing	Time-Frame without Crisis Processing
 To the Group: The last part of this group will be devoted to identifying where you are at the present time in your readiness to change. Remember, every person goes through stages of change: Pre-Contemplation, Contemplation, Preparation, Action, and Maintenance when they are making any behavior changes. Ambivalence (feeling two ways about something – like "I want to" but "I don't want to" is a natural way to working out the "Pro's" and "Con's" of behavior change. Think of a behavior change you are Contemplating about changing or a behavior change you are Preparing to change in the very near future or a behavior change you are currently taking Action to change. (i.e. Abstinence, Treatment for Depression, Medication Evaluation, Getting a Sponsor, etc.) This group is not intended to reach a commitment to change. It is meant to show a skill that each person can use throughout recovery to evaluate or think about these four categories: What is my <i>desire</i> to make this change. What is my <i>desire</i> to make this change? What is a great help to evaluate your current commitment and readiness to change using the following guide: 	Continued	Continued
